FlexiScale - 15

TECHNOLOGICALLY ADVANCED

FlexiScale 15 Postal Scale and Rates-by-Modem®

The FlexiScale 15 is a technologically advanced postage scale utilizing state-of-the-art circuitry to provide precise weighing in a wide range of conditions. The design of the Flexiscale is, as the name implies, flexible. Softkeys, rather than fixed buttons, permit easily implemented changes when carrier services change. The LCD display will indicate the function of the adjacent button, depending on which mode is being used.

Rates-by-Modem, a patented FP technology, provides the ability to update the FlexiScale's carrier rate tables with push button ease. It is no longer necessary to open any panels, remove old memory chips or install new ones. It's easy, fast, and can be updated in advance of a rate change, since the scale is able to implement the rate change on the rate's effective date.

FP's introduction of the FlexiScale actually creates a new paradigm in mailing systems. A postal scale is useless without accurate rates, and keeping internal rate tables current has meant ordering and installing rate chips, or EPROMs. While not a difficult installation, it is still necessary to open a panel on the scale and remove and reinstall a component of the scale.

FlexiScale's introduction coincides with the introduction of FP's patented Rates-by-Modem, utilizing our Remote Rate Server. Rates-by-Modem is available to customers utilizing a FlexiScale interfaced to an FP T-1000 meter.* Updating rates becomes a quick and easy task with FlexiScale, much like the FP T-1000 Teleset Data Center® revolutionized the way postage is refreshed in a meter.

*Meter have modem switching function enabled. See your authorized FP representative for details.
